Genuine Blood & Bone

Genuine Blood & Bone

APPLICATION RATES	
Vegetable and Annual Flowers	At planting – Apply 200 grams per square metre
Roses, Fruit Trees and Shrubs	Apply 100 grams per square metre around roses, fruit trees and shrubs keep away from trunk
Australian Natives	Apply 25 grams per square metre
What is a good blood & bone?	A good Blood & Bone product is the undiluted by-product from abattoirs which has been cooked, dried and milled to a consistent size with the fat removed, thus creating Genuine Blood & Bone.
What are the advantages of a High Nitrogen Blood & Bone such as Terra Firma's?	The advantages of a Genuine Blood & Bone is that the nutrient level is far higher and the plant growth results are far superior. A good Blood & Bone will stimulate microbial action of the soil. You use a lot less of a good quality Blood & Bone to achieve a better result than a Blood & Bone lower in Nitrogen.
