

# Natives & Shrubs

## Food for natives

Our Native & Shrubs fertiliser is designed to cater to the requirements of native plants, trees, and grasses, as well as shrubs, palms and tropicals. Natives & Shrubs is a slow release, high nitrogen and low phosphorus blend that contains all the major and trace elements in a ratio best suited to the growing needs of these plants.

Additionally, it is especially suitable for all soil types that are too high in phosphorus. This product contains a composted base of Poultry Manure with added Sulphate of Potash, Feathermeal, Blood Meal, Kelp & Zeolite.

**Why those ingredients?** The inclusion of Natural Gypsum will increase Calcium and Sulphur without changing the pH of the soil. Blood Meal & Feathermeal provide an initial nitrogen release and a slow-release nitrogen form, respectively. And Sulphate of Potash ensures that flowers and fruit production is consistent. Not only is Natives & Shrubs perfect for all your Natives including Bottlebrush, Grevillea, Protea, Kangaroo Paw Plants Shrubs and Native Grasses, but can be used in the whole garden. Natives & Shrubs is great for tropicals, palms, veg gardens, fruit trees and all lawn varieties.

Nitrogen (N)	5.50%	Boron (B)	230mg/kg
Phosphorus (P)	1.20%	Manganese (Mn)	300mg/kg
Potassium (K)	2.50%	Iron (Fe)	1220mg/kg
Sulphur (S)	1.00%	Molybdenum (Mo)	1.8mg/kg
Calcium (Ca)	3.10%	Cobalt (Co)	3mg/kg
Magnesium (Mg)	0.68%	Silicon (Si)	1640mg/kg
Zinc (Zn)	300mg/kg	Carbon (C)	25.92
Copper (Cu)	70mg/kg		

### APPLICATION RATES

#### NATIVE & SHRUBS GENERAL RATES

GENERAL: 100g - 200g per square metre.

#### NATIVE TREE & SHRUBS:

Before planting mix 50g with the soil at the base of the planting hole.

Spread another 50g on top of the soil and under the mulch.

Established - Spread 100g per square metre, away from the trunk and out to the drip line of the plant.

#### ROSE, FLOWERS & VEGETABLES:

Spread 200g per square metre 1 - 2 weeks before planting. Work into top 5 - 10cm & water.

Established - Spread 100g per square metre every 4 - 6 weeks. For annual flowers apply at early bud formation.

#### FRUIT TREES:

Before planting mix 100g with the soil in the bottom of the planting hole. Spread another 50g around the drip line and cover with mulch. Established - Spread 500g up to 4kg for older trees. For Citrus apply in July, November & March.

#### STRAWBERRIES:

Spread 200g per square metre & mix into soil during bed formation. Side dress rows once every 4 - 6 weeks - 75g per metre of row after flowering commences.

#### VINES & BULBS:

Spread 100g per square metre before planting. Side dress rows once every 4 - 6 weeks - 75g per metre of row after flowering commences.
